

# Introducing static grounding reels made of stainless steel.

Ideal around fuels, combustibles and salt environments.

Why risk a discharge of static electricity sparking an explosion? These 20–50' stainless steel static grounding reels eliminate the danger. They outlast powder-coated steel reels in tough environments, and their clip jaws open a full 1-1/16" for easy attaching to structural assemblies or bars. With long-life springs and easy auto-retract, they're the safer solution for docks, watercraft fueling, barge loading/unloading and other marine applications.
